

Stainless Steel Jockey Box Maintenance and Care Guide

- Clean coils and beer lines immediately after each use.
- Coils are only intended for beer and should never be used with any other beverages besides water.
- **Never leave beer or water in the coils when storing jockey box.** For best results, empty cooler of ice and water after each use and clean properly with purified or distilled water and chemicals specifically manufactured for beer line cleaning. (Cleaning kits are available)
- Monitor vinyl beer lines for yellow discoloration and are recommended to be replaced yearly (May need to replace sooner if not cleaned properly)
- **Clean outside** of stainless steel coils with a mild soap. Rinse with clean water and wipe dry.
- Never use cleaners containing chlorine, chlorides, bleaches, or mineral acids.
- Never clean with abrasives (i.e. sandpaper and steel wool). This will cause rusting.
- Never let stainless come in contact with iron, steel, or other metals, which causes contamination leading to rust or corrosion.
- **Handling or cleaning stainless coils improperly will cause pitting and rusting and may even cause holes in the tubing. Coils handled or cleaned in such a manner will be damaged beyond repair and voids all warranties.**
- Never leave any standing water inside jockey box housing.
- Never leave any liquids in drip tray and clean thoroughly after each use with mild soap.
- Never leave jockey box unit or parts exposed to the elements , especially in hot and humid environments

We want your equipment to last! Rust and pitting can only be prevented.

Misuse that results in rust or pitting will not be covered by the warranty.

If you have question about instructions ask us as soon as they come up to ensure you get the full life out of your equipment.
